

Ortotech s.r.o.

Ortotech s.r.o. provides comprehensive services in the area of orthopaedics, prosthetics, physiotherapy and production of tailor-made orthopaedic and prosthetic medical devices. While carrying out the renovation, the owners of the company decided to use electric heating to upgrade the heating equipment and especially to be able to employ their own production technology.

The renovation included a building originally equipped with a central hot-water heating system situated on the premises of the Roosevelt Hospital in Banska Bystrica. The four-storey building with a floor area of 1200 m² is heated by Ecosun radiant panels now. Total 127 pieces of panels are installed: 42 pieces of Ecosun 300U and 85 pieces of Ecosun 600U. Regulation is central and it is carried out by DUEL Námestovo.
